

ELGIN & HALL

---

BRINGING NEW QUALITY TO GAS FIRES

With a heritage of over 30 years building fireplaces in Britain, we have long recognised the virtues of gas fires. They bestow real heat with real flames, but unlike open coal fires they come alive at your bidding and are perfectly clean and controllable.

So why have we waited to launch a gas fire collection of our own? Quite simply, it has to be great to be good enough for Elgin & Hall. Everything comes down to quality, efficiency, operation and good looks.

Settle in front of the hearth and you'll soon be fascinated by the flame picture that dances from the glowing, flickering bed of hand-crafted ceramic coals, remarkably evocative of the real thing.

The warmth they radiate is equally welcoming – as much as 4.5kW of adjustable heat. That's enough to make the room cosy from corner to corner. So you can save on central heating and enjoy up to 89% efficiency.

Turn the pages, and you'll agree that the designs achieve true Elgin & Hall elegance and simplicity. Your choice will always reflect your tastes, even if they shift between traditional and modern over time.

**ELGIN & HALL**

[www.elginandhall.co.uk](http://www.elginandhall.co.uk)

# *Achieving the perfect balance*

---

## **YOUR HOME AND YOUR CHIMNEY**

PAGE 4-5

The various types of flue and chimney require different size specifications of gas fire. Whichever kind your home has, there is an Elgin & Hall gas fire to fit. Turn the page over and you will easily identify which one is suitable.

---

---

### **FIRST CHOOSE THE RIGHT FIRE**

PAGE 6-7

Elgin & Hall offer a choice between three types of fire - radiant, convector or glass fronted styles. Each has its advantages in terms of how realistic they look when burning, how much heat they output and how efficiently they use fuel.

---

---

### **THEN CHOOSE YOUR TRIM**

PAGE 8-9

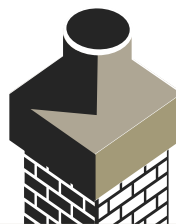

Every type of fire offers you no less than four variations in finish options. Together with the fret across the base, the style and finish of trim determines the total visual impact which the whole fire creates.

---

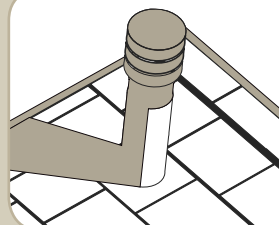

# *What fire is right for my home?*

All gas fires require a chimney or flue to conduct expended gases to the exterior. To identify which type your house has and which model of fire will fit (slimline, mid-depth or deepline), check the simple descriptions below. Still unsure? Your Elgin & Hall retailer will be happy to advise.

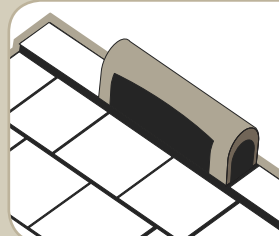

## **BRICK CHIMNEY (CLASS 1)**

Easily recognisable from the stack above the roofline (usually with a pot or gas terminal), with this chimney you can install all our gas fires.

## **PRE-FABRICATED FLUE (CLASS 2)**

Identifiable by a metal flue and terminal on the roof, this flue system is suitable for all our gas fires.

## **PRE-CAST FLUE**

Recognisable by a ridge vent on the roofline, and built from concrete or clay blocks usually within the wall cavity, they are perfect for our Catalina or Radion\* gas fires.

\* Radion fire suitable when installed with a 75mm rebated surround

## *Super controllable*

### **SMARTSLIDE CONTROL** - All models

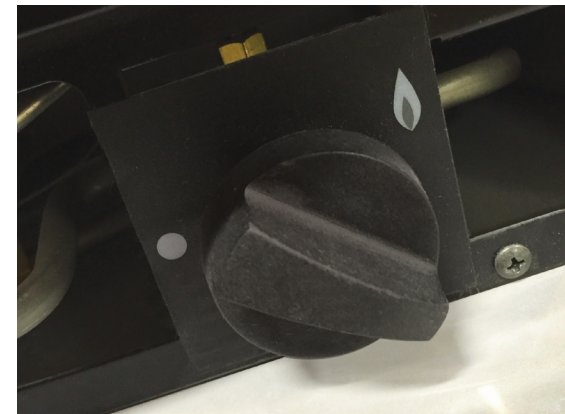

The discreet Smartslide Control mounted at the top right hand side makes your Elgin & Hall gas fire convenient to operate. To turn the fire on simply press down and release. Likewise you can turn the fire off by lifting to its top position. The control's second function is to regulate the flame height and heat output. It gives you the freedom to change the fire picture from smouldering to blazing at a touch to suit your mood and desired room temperature.

### **MANUAL CONTROL**

- Catalina, Radion and Cobalt only

All our open fronted gas fires are available as manual control. Neatly concealed behind the fret, these controls allow you to regulate your heat output and flame setting before replacing the fret for a sleek finish.

## *Safety assurance...*

### **QUALITY APPROVED**

You have the peace of mind knowing that all Elgin & Hall gas fires are made in accordance with Quality Management System Standard ISO 9001, the stringent, internationally recognised standard for quality and environmental performance.

### **FLAME FAILURE DEVICE**

All Elgin & Hall gas fires are fitted with a flame monitoring device which ensures that in the event of the flame going out during its operation, the gas supply to the fire is instantly cut off.

### **OXYGEN DEPLETION SENSOR**

For your safety, all Elgin & Hall gas fires are fitted with an Oxygen Depletion Sensor whose function is to shut off the gas supply if the oxygen level is too low in the room or if there is a blockage in the chimney or flue.

### **INSTALLATION**

Current regulations stipulate that all gas fire installations must be carried out by a Registered Gas Safe Engineer. For information and advice on a Gas Safe Engineer, please contact your local Elgin & Hall retailer.

### **SERVICING**

We recommend that all gas fires are serviced by a Registered Gas Safe Engineer to ensure continued operation and optimum performance. This annual service is a condition of our 5 year guarantee, and you must be able to show a record of approved servicing to be able to make a claim.

# Choose the perfect fire...

All gas fires are rigorously tested and checked by our internal Quality Control Department. We provide a 5 year Warranty\* so you can be confident you have purchased and installed a high quality product.

\*Terms & conditions apply.

5  
YEAR WARRANTY

The first thing to decide is whether you prefer an open fire with living flames and welcoming glow or the lower costs delivered by the greater efficiency of glass fronted technology. Then consider the fit – all models for brick chimneys and pre-fabricated flues and the slimline Catalina for pre-cast flues. Having identified which type is right for your home, turn to the appropriate page to explore details of design and finish.

## OPEN FRONTED GAS FIRES

### CATALINA

SLIMLINE RADIANT  
GAS FIRE

The heated glowing coal bed pulls in air to radiate warmth back into the room. Because they are open fronted, these fires give a clear impression of a traditional open fire. The output is around 3.5kW so the room is nice and warm.

### RADION

DEEPLINE RADIANT  
GAS FIRE

### COBALT

CONVECTOR  
DEEPLINE GAS FIRE

An open fronted fire that sends out a hot airstream through the canopy to circulate warmth throughout the room.

## GLASS FRONTED HIGH EFFICIENCY GAS FIRES

### INDIGO

HIGH EFFICIENCY  
MID-DEPTH GAS FIRE

A panel of ceramic glass across the front of the fire prevents air being drawn in then up the flue, so a very high proportion of the fire's radiant and convected heat is concentrated into the room - consuming less fuel to achieve an output better than an open fronted fire.

### UTOPIA

HIGH EFFICIENCY  
DEEPLINE GAS FIRE

### CHOLLERTON

HIGH EFFICIENCY  
WIDESCREEN GAS FIRE

*and make life easier with some simple additions*

### **XTRA CANOPY FOR HIGHER EFFICIENCY** (AVAILABLE ON CATALINA & RADION MODELS)

Standing for extra efficiency, this comes in the form of a canopy kit designed to “tune” the appliance to your flue and thereby raise the efficiency by up to 8%, ensuring you obtain the maximum output from an open fronted fire.

### **EASY TO INSTALL SPACER KIT**

The spacer kit fits to the rear of the fire and reduces the depth by 25mm. It is ideal for use with pre-cast flues where sufficient space may not be available.

Easy Grip Handle

Chrome Handle

Brass Handle

### **SMARTSLIDE MATCHING & EASY GRIP HANDLE OPTIONS**

Handle options are available for all fires. An easy grip attachment allows people with restricted movement to control the ignition and heat settings. Matching colour handles are available in Brass & Chrome to complement your chosen fire.

Black handle supplied as standard

# *Exclusive or Devotion*

## *Select your trim style and finish*

### EXCLUSIVE TRIM

BRUSHED STEEL

The framework of the Exclusive trim has a flat facing and long bevel, sloping down to the fire bed. The trim is broad and slightly accented in profile to complement the four boldly curving bands of the fret.

In Brushed Steel, Brass, Chrome or Black, the harmony of the trim and fret creates a non-fussy but sympathetic note to a stylish interior. A classic in the making.

BRASS

CHROME

BLACK

Consider a gas fire as a solid investment. It's going to take pride of place as the focus of your living room life. You can change your furniture, your décor, your curtains, your carpet. But your Elgin & Hall fire – like our marble surrounds in which they are featured - are built to last as an asset to your home.

Both the Exclusive and Devotion trims have a simplicity that will be perfectly in keeping with any fire surround of quality and will add value to any well-loved room – whether modern, traditional or an eclectic blend of the two. Each of them offer four alternative finishes for you to consider. Which will you choose in order to add that final flourish and tie in perfectly with your tastes?

## DEVOTION TRIM

**BLACK / CHROME**

The distinguishing feature of this range of designs is the black epoxy coated framework bordering either side of the metal trim. This serves to provide a dramatic contrast which accentuates the Chrome, Brass, Nickel or Brushed Steel finish.

The fire itself curves slightly inwards to add extra interest. At the same time the thickness of the black framework makes it stand out subtly from the surround.

**BLACK / BRASS**

**BLACK / NICKEL**

**BLACK / BRUSHED STEEL**

# Catalina

## SLIMLINE RADIANT GAS FIRE

For an open hearted welcome, this open fronted fire is hard to beat. You'll be delighted how the embers shimmer into life at your command. Just as quickly, the rising flames send out a comforting level of warmth.

Note how the Chrome finish of this Exclusive trim model within its Elgin & Hall fireplace evokes a timeless, home loving impression. Being slimline it's ideal for houses with a pre-cast flue.

# Cobalt

## DEEPLINE CONVECTOR GAS FIRE

If you would like to combine the authentic look of an open fronted fire with appreciable fuel efficiency, this member of the Elgin & Hall gas fire family is a brilliant solution.

It draws in air, passes it through a heat exchanger and projects it over the canopy as a super-heated stream. This circulates warm air through every corner of the room in which the Cobalt makes an eye-catching centrepiece.

## MID-DEPTH HIGH EFFICIENCY GAS FIRE

Picture this glass fronted fire framing dancing flames in your living room. Now add a welcome 87% efficiency rating with consequent lower running costs. That's the result of the glass panel concentrating the radiant heat into the room without sucking in cooler air.

See how the Devotion trim frames the fire to make it subtly stand out. This mid-depth edition is the choice for both traditional chimneys and pre-fabricated flues.

## WIDESCREEN HIGH EFFICIENCY GAS FIRE

The Chollerton gas fire is a widescreen glass-fronted fire, providing an impressive 88% efficiency and maximum heat output of 4.4kW. Available with a choice of trim finishes including Brass, Chrome, Nickel and Brushed Steel with an Anthracite profiled edge, the Chollerton provides a panoramic vision of dancing flames.

Designed for installation into a wider 22" cut out back panel, the fire comes with the convenience of fitting cleanly into a standard chimney opening with no remedial or building work to extend the chimney breast. Due to the depth of the fire, it can only be installed with a 75mm rebate surround from the Elgin & Hall range, including those featuring smartsense lighting.

### Caring For Your Fire:

Our range of gas fires have been designed to provide you with a clean and efficient heat source as well as years of hassle-free operation.

To ensure your fire provides you with maximum enjoyment we have provided the following guidelines for caring for your fire.

1. Only use a Gas Safe Engineer to fit or service your gas fire.
2. Never attempt to remove or service the gas fire yourself.
3. Your gas fire should be regularly serviced and safety checked every year.
4. If you think there might be a gas leak or notice any signs of carbon monoxide, act quickly and follow the advice for gas emergencies.
5. If you are in any doubt regarding your gas fire, speak to a Gas Safe Engineer or contact your local fireplace retailer for assistance.

### Cleaning Your Fire:

- Double-check to make sure the gas fire is in the off position.
- Always make sure the fire and all of the components are cool before you attempt to clean your gas fire.
- Use a soft brush or vacuum to remove any dust or debris around the gas fire.
- Use a soft brush to remove any dirt or dust from the coals. The coals are extremely fragile so use caution. Check for corrosion or damage. If you believe any of the coals are damaged, call your local retailer who will be able to provide replacement coals. Do not use the fire until the coals have been replaced.
- The outside of the fire can be cleaned using a clean cloth. Wipe any dirt or dust from the trim and fret. Do not use abrasive or corrosive cleaners as these may damage the fire. Periodic cleaning will help keep the fire looking at its best.
- Glass fronted fires can be cleaned with a soft cloth removing any dust and dirt. Do not spray the glass with cleaning fluid as overspray may land on the surrounding metal or coals causing damage.
- Do not attempt to clean any of the internal parts of the fire – this must be done by a Gas Safe Engineer.

## *Be Modern | Group of companies*

## bemodern

FIRES | FIREPLACES

Be Modern has been manufacturing the finest fireplaces for over 50 years. Its reputation for quality and service remains unmatched and products are sold through leading retailers across the UK.

Continuous investment throughout its UK factories gives the winning edge and in-house design teams strive to incorporate the latest innovations and technologies. Each fireplace is lovingly created by highly skilled employees.

## ELGIN & HALL

Elgin & Hall originated from a small Wensleydale workshop nearly 30 years ago where individually handcrafted fireplaces were created by master craftsmen. Today the heritage of British design lives on.

An extensive range of beautiful fireplaces are available through selected showrooms with designs that have elegance and simplicity to compliment your tastes in furnishing, fabric and décor.

## BROSELEY

Named after the village in the heart of England, Broseley is just across the historic ironbridge from Coalbrookdale where 18th century ironmasters forged the Industrial Revolution.

Today Broseley continues to supply a leading range of cast iron and steel stoves in contemporary and traditional designs with options for multifuel, wood burning, electric or gas.

## atlanta

BATHROOMS

Under three individual brands, Be Modern manufactures stunning ranges of furniture.

**Atlanta** is a stylish and affordable collection of easy to install bathroom furniture.

**Mallard** is a simple luxurious range of bathroom and bedroom furniture.

**Be:** manufacture an exclusive range providing the ultimate in luxury bathroom design. All products are supplied with a lifetime guarantee.
